Avalanche.report

1 low    2 moderate    3 considerable    4 high    5 very high

## Danger Level 2 - Moderate

**Tendency: Constant avalanche danger** →  
on Thursday 11 04 2019

Wet snow

Wet snow slides and avalanches are the main danger. This applies below approximately 2200 m.

As a consequence of the rain, the likelihood of wet snow slides and avalanches being released will increase a little. Mostly small wet loose snow avalanches are possible below approximately 2000 m, this applies even in case of a small load. Caution is to be exercised in particular on extremely steep slopes. In addition a certain danger of wet slab avalanches exists, in particular on very steep shady slopes in areas close to the tree line.

## Snowpack

**Danger patterns**

dp 3: rain

In some localities up to 10 cm of snow. will fall until the early morning. Over a wide area 5 to 10 cm of snow. will fall from early morning. Up to 2000 m rain will fall. The wind will be light. Isolated avalanche prone weak layers exist in the bottom section of the old snowpack on shady slopes. Here individual wet slab avalanches are possible as the penetration by moisture increases. This applies especially in areas close to the tree line. The fresh snow is bonding well with the old snowpack. The snowpack will be wet all the way through at intermediate altitudes. At low altitude hardly any snow is lying.

## Tendency

The danger of wet snow slides and avalanches will persist.

## Danger Level 2 - Moderate

**Tendency: Constant avalanche danger** →  
 on Thursday 11 04 2019

Wet snow

Gliding snow

Up to 2000 m rain will fall. Wet and gliding avalanches are the main danger.

As a consequence of the rain, the likelihood of gliding avalanches and wet snow slides being released will increase a little. More small to medium-sized wet loose snow avalanches are possible below approximately 2000 m, this applies even in case of a small load. Caution is to be exercised in particular on extremely steep slopes. In addition a latent danger of gliding avalanches exists. This applies in all aspects below approximately 2200 m.

### Snowpack

**Danger patterns**

dp 3: rain

dp 2: gliding snow

In some localities up to 10 cm of snow will fall until the early morning. Over a wide area 5 to 10 cm of snow, and even more in some localities, will fall from early morning, especially south of the Inn. Rain below approximately 2000 m. The wind will be light. The fresh snow is bonding well with the old snowpack. The snowpack will be wet all the way through at intermediate altitudes. At low altitude hardly any snow is lying.

### Tendency

The avalanche danger will persist. Wet loose snow avalanches and gliding avalanches are still possible.
