

Danger Level 2 - Moderate

Tendency: Constant avalanche danger →
on Friday 06 12 2019

Gliding snow

Caution is to be exercised in areas with glide cracks.

Individual gliding avalanches are possible, even large ones in isolated cases, especially in the regions with a lot of snow below approximately 2600 m. Areas with glide cracks are to be avoided as far as possible. Fresh wind slabs require caution. The fresh wind slabs are small. Isolated avalanche prone locations are to be found on extremely steep shady slopes at high altitudes and in high Alpine regions and adjacent to ridgelines.

Snowpack

Danger patterns

dp 2: gliding snow

The fresh wind slabs have bonded quite well with the old snowpack. The old snowpack will be moist below the tree line.

Tendency

The avalanche danger will persist. The snow sport conditions outside marked and open pistes are generally favourable.

Danger Level 1 - Low

Tendency: Constant avalanche danger →
on Friday 06 12 2019

Favourable
situation

The conditions are favourable.

A little snow is lying. Individual avalanche prone locations for dry avalanches are to be found in particular on extremely steep shady slopes, especially adjacent to ridgelines. Such avalanche prone locations are rare and are easy to recognise.

Snowpack

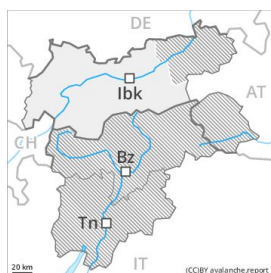

The snowpack will be stable over a wide area. This applies at high altitude. At low and intermediate altitudes hardly any snow is lying.

Tendency

Low, level 1.

Danger Level 1 - Low

Tendency: Constant avalanche danger →
on Friday 06 12 2019

Wind-drifted
snow

Wind slabs above approximately 2400 m.

Fresh wind slabs can still be released in some cases in particular on extremely steep shady slopes above approximately 2400 m, in particular adjacent to ridgelines. Avalanches are rather small. Caution is to be exercised in particular in the regions exposed to the foehn wind.

Snowpack

Danger patterns

dp 6: cold, loose snow and wind

In isolated cases wind slabs are lying on soft layers. This applies at high altitudes and in high Alpine regions. The old snowpack will be moist below the tree line.

Tendency

The avalanche conditions are favourable.
