

## Danger Level 2 - Moderate

**Tendency: Constant avalanche danger** →  
on Monday 15 03 2021

Wind-drifted  
snow

### Fresh wind slabs require caution.

Fresh and somewhat older wind slabs are mostly small but can be released easily. Caution is to be exercised in particular on steep shady slopes above approximately 2200 m, as well as adjacent to ridgelines and in gullies and bowls. At elevated altitudes the avalanche prone locations are more prevalent. In the regions exposed to the foehn wind the avalanche prone locations will become more prevalent from the early morning. These avalanche prone locations are clearly recognisable to the trained eye. In steep terrain there is a danger of falling on the hard snow surface.

### Snowpack

#### Danger patterns

dp.6: cold, loose snow and wind

Some snow will fall over a wide area. Storm force foehn wind from the north: The wind will transport the new snow and, in some cases, old snow as well. The fresh and somewhat older wind slabs are lying on soft layers in particular on northwest to north to northeast facing aspects. The old snowpack will be stable over a wide area.

### Tendency

Fresh wind slabs require caution.

## Danger Level 1 - Low

**Tendency: Constant avalanche danger** →  
on Monday 15 03 2021

Wind-drifted  
snow

2200m
