

Danger Level 2 - Moderate

Tendency: Constant avalanche danger →

on Tuesday 16 03 2021

Wind-drifted
snow

Fresh wind slabs require caution.

Fresh and somewhat older wind slabs are mostly small but can be released easily. Caution is to be exercised in particular on steep shady slopes above approximately 2200 m, as well as adjacent to ridgelines and in gullies and bowls. At elevated altitudes the avalanche prone locations are more prevalent. These avalanche prone locations are clearly recognisable to the trained eye. In steep terrain there is a danger of falling on the hard snow surface.

Snowpack

Danger patterns

dp.6: cold, loose snow and wind

The wind has transported the fresh and old snow. The fresh and somewhat older wind slabs are lying on soft layers in particular on northwest to north to northeast facing aspects. The old snowpack will be stable over a wide area.

Tendency

Fresh wind slabs require caution.
