Updated 30 01 2022, 17:00

### **Danger Level 1 - Low**

**Tendency: Constant avalanche danger** on Tuesday 01 02 2022

### Wind slabs require caution.

Wind slabs represent the main danger. Wind slabs can be released in isolated cases at high altitudes and in high Alpine regions. The avalanche prone locations are to be found especially on steep shady slopes and adjacent to ridgelines and in pass areas. Mostly avalanches are small. As a consequence of the strong wind the wind slabs will increase in size additionally. They are to be avoided especially in very steep terrain. In steep terrain there is a danger of falling on the hard snow surface.

### Snowpack

**Danger patterns** 

dp.6: cold, loose snow and wind

The wind will be strong to storm force. The strong wind will transport the snow. The wind slabs are lying on soft layers in particular on steep shady slopes. The old snowpack will be in most cases stable. At elevated altitudes snow depths vary greatly, depending on the infuence of the wind. Only a small amount of snow is lying for the time of year.

### Tendency

Wind slabs require caution.

### **Danger Level 1 - Low**

**Tendency: Increasing avalanche danger** on Tuesday 01 02 2022

### Wind slabs require caution.

Wind slabs represent the main danger. Fresh and somewhat older wind slabs can be released in isolated cases at high altitudes and in high Alpine regions. The avalanche prone locations are to be found especially on steep shady slopes and adjacent to ridgelines and in pass areas. Mostly avalanches are small. As a consequence of the strong wind the wind slabs will increase in size additionally. They are to be avoided especially in very steep terrain.

In steep terrain there is a danger of falling on the hard snow surface.

#### Snowpack

**Danger patterns** 

(dp.6: cold, loose snow and wind)

Little snow will fall. The wind will be strong to storm force. The strong wind will transport the snow. The wind slabs are lying on soft layers in particular on steep shady slopes. The old snowpack will be in most cases stable. At elevated altitudes snow depths vary greatly, depending on the infuence of the wind. Only a small amount of snow is lying for the time of year.

### **Tendency**

Slight increase in avalanche danger as a consequence of new snow and strong wind.
