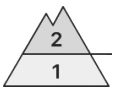
Danger Level 2 - Moderate



Treeline

Tendency: Constant avalanche danger
on Wednesday 02 02 2022

Wind-drifted snow

Treeline

Wind slabs require caution.

Wind slabs represent the main danger. Fresh and somewhat older wind slabs can be released by a single winter sport participant in some cases at high altitudes and in high Alpine regions. The avalanche prone locations are to be found especially on steep shady slopes and adjacent to ridgelines and in pass areas. Mostly avalanches are small. As a consequence of the strong wind the wind slabs will increase in size additionally. They are to be avoided especially in very steep terrain.
In steep terrain there is a danger of falling on the hard snow surface.

Snowpack

Danger patterns dp.6: cold, loose snow and wind

Some snow will fall. The wind will be strong to storm force. The strong wind will transport the snow. The wind slabs are lying on soft layers in particular on steep shady slopes. The old snowpack will be in most cases stable. At elevated altitudes snow depths vary greatly, depending on the infuence of the wind. Only a small amount of snow is lying for the time of year.

Tendency

The avalanche danger will persist.

Danger Level 1 - Low

Tendency: Constant avalanche danger
on Wednesday 02 02 2022

Wind-drifted snow

Treeline

Wind slabs require caution.

Wind slabs represent the main danger. Fresh and somewhat older wind slabs can be released in isolated cases at high altitudes and in high Alpine regions. The avalanche prone locations are to be found especially on steep shady slopes and adjacent to ridgelines and in pass areas. Mostly avalanches are small. As a consequence of the strong wind the wind slabs will increase in size additionally. They are to be avoided especially in very steep terrain.
In steep terrain there is a danger of falling on the hard snow surface.

Snowpack

Danger patterns dp.6: cold, loose snow and wind

The wind will be strong to storm force. The strong wind will transport the snow. The wind slabs are lying on soft layers in particular on steep shady slopes. The old snowpack will be in most cases stable. At elevated altitudes snow depths vary greatly, depending on the infuence of the wind. Only a small amount of snow is lying for the time of year.

Tendency

Slight increase in avalanche danger as a consequence of the strong to storm force northwesterly wind.

Danger Level 1 - Low

Tendency: Increasing avalanche danger

As a consequence of the strong wind the wind slabs will increase in size additionally. They are to be avoided especially in very steep terrain.
In steep terrain there is a danger of falling on the hard snow surface.

Snowpack

Danger patterns dp.6: cold, loose snow and wind

Little snow will fall. The wind will be strong to storm force. The strong wind will transport the snow. The wind slabs are lying on soft layers in particular on steep shady slopes. The old snowpack will be in most cases stable. At elevated altitudes snow depths vary greatly, depending on the infuence of the wind. Only a small amount of snow is lying for the time of year.

Tendency

Slight increase in avalanche danger as a consequence of new snow and strong wind.
