

Danger Level 3 - Considerable

Treeline

Tendency: Constant avalanche danger →

on Sunday 18 12 2022

Wind slab

Treeline

Snowpack stability: **poor**

Frequency: **some**

Avalanche size: **large**

Persistent weak layer

Treeline

Snowpack stability: **poor**

Frequency: **some**

Avalanche size: **medium**

Fresh wind slabs require caution.

As a consequence of new snow and a moderate wind from southerly directions, sometimes avalanche prone wind slabs formed in the last few days adjacent to ridgelines and in gullies and bowls as well as at high altitude. Avalanches can be released by a single winter sport participant. On wind-loaded slopes medium-sized avalanches are possible.

Natural avalanches are possible in isolated cases. Mostly avalanches are small. In addition further small and medium-sized gliding avalanches are possible.

The avalanche prone locations are to be found in all aspects above approximately 1800 m. Caution is to be exercised in gullies and bowls, and behind abrupt changes in the terrain, as well as adjacent to ridgelines.

Snowpack

Over a wide area 20 to 30 cm of snow, and even more in some localities, has fallen since Thursday above approximately 1500 m. In the last two days sometimes avalanche prone wind slabs formed in some localities. Towards its base, the snowpack is faceted.

Tendency

The avalanche danger will persist.

Danger Level 2 - Moderate

Tendency: Constant avalanche danger →
on Sunday 18 12 2022

Wind slab

Treeline

Snowpack stability: **poor**

Frequency: **some**

Avalanche size: **medium**

More recent wind slabs are to be assessed with care and prudence.

As a consequence of new snow and a moderate wind from southerly directions, sometimes avalanche prone wind slabs formed in the last few days adjacent to ridgelines and in gullies and bowls as well as at high altitude. Avalanches can be released by a single winter sport participant. On wind-loaded slopes medium-sized avalanches are possible.

Natural avalanches are possible in isolated cases. Mostly avalanches are small. In addition further small and medium-sized gliding avalanches are possible.

The avalanche prone locations are to be found in all aspects above approximately 1800 m. Caution is to be exercised in gullies and bowls, and behind abrupt changes in the terrain, as well as adjacent to ridgelines.
