

Danger Level 2 - Moderate

Tendency: Constant avalanche danger →
on Saturday 13 01 2024

Wind slab

Treeline

Snowpack stability: **poor**

Frequency: **some**

Avalanche size: **medium**

Fresh and older wind slabs require caution.

The fresh and somewhat older wind slabs can be released by a single winter sport participant above the tree line. Caution is to be exercised in all aspects in gullies and bowls, and behind abrupt changes in the terrain. The number and size of avalanche prone locations will increase with altitude.

In addition a latent danger of gliding avalanches exists, in particular on steep east, south and west facing slopes below approximately 2600 m. In isolated cases the gliding avalanches are quite large.

Snowpack

Danger patterns

dp.6: cold, loose snow and wind

dp.2: gliding snow

As a consequence of a gathering strong wind from northerly directions, further wind slabs will form in the course of the day. The somewhat older wind slabs are lying on soft layers. The fresh wind slabs are lying on surface hoar in some places.

Towards its base, the snowpack is largely stable. Snow depths vary greatly above the tree line, depending on the influence of the wind. The snowpack will be subject to considerable local variations.

Tendency

The fresh and older wind slabs remain in some cases prone to triggering.

Danger Level 1 - Low

Tendency: Constant avalanche danger →
on Saturday 13 01 2024

Wind slab

Treeline

Snowpack stability: **poor**

Frequency: **few**

Avalanche size: **small**

Wind slabs require caution.

The fresh and somewhat older wind slabs can be released in isolated cases, especially at their margins. Caution is to be exercised in particular adjacent to ridgelines in gullies and bowls, and behind abrupt changes in the terrain. Mostly avalanches are small.

Snowpack

Danger patterns

dp.6: cold, loose snow and wind

The fresh and somewhat older wind slabs are lying on soft layers. The old snowpack will be quite stable.

Tendency

Wind slabs require caution.
