

## Danger Level 2 - Moderate

**Tendency: Constant avalanche danger** →  
on Tuesday 23 01 2024

Wind slab

Treeline

Snowpack stability: **poor**

Frequency: **some**

Avalanche size: **medium**

The wind slabs represent the main danger.

The sometimes deep wind slabs of the weekend must be evaluated with care and prudence in all aspects above the tree line. These can be released even by a single winter sport participant. Mostly the avalanches are medium-sized.

The avalanche prone locations are to be found in particular adjacent to ridgelines and in gullies and bowls in all aspects. The sometimes large wind slabs are clearly recognisable to the trained eye. They are to be avoided whenever possible.

## Snowpack

### Danger patterns

dp.6: cold, loose snow and wind

More recent wind slabs are poorly bonded with the old snowpack above the tree line. Snow depths vary greatly, depending on the influence of the wind.

Towards its base, the snowpack is largely stable.

## Tendency

The avalanche danger will persist.

## Danger Level 1 - Low

**Tendency: Constant avalanche danger** →  
on Tuesday 23 01 2024

Wind slab

Treeline

Snowpack stability: **poor**

Frequency: **few**

Avalanche size: **small**

### Wind slabs represent the main danger.

The more recent wind slabs can be released by a single winter sport participant. Caution is to be exercised in particular adjacent to ridgelines in gullies and bowls, and behind abrupt changes in the terrain. Mostly avalanches are small.

### Snowpack

#### Danger patterns

dp.6: cold, loose snow and wind

The wind slabs of the last few days are poorly bonded with the old snowpack. The fresh wind slabs can be released easily. or in isolated cases naturally,.

### Tendency

The wind slabs represent the main danger. The avalanche danger will persist.
