

## Danger Level 3 - Considerable

**Tendency: Decreasing avalanche danger**  
on Thursday 25 04 2024

Wind slab

Snowpack stability: **very poor**

Frequency: **some**

Avalanche size: **medium**

New snow

Snowpack stability: **poor**

Frequency: **some**

Avalanche size: **medium**

Small to medium-sized loose snow avalanches are to be expected. Wind slabs in the high Alpine regions.

Small to medium-sized loose snow avalanches are to be expected. In the event of prolonged bright spells this applies on extremely steep slopes and.

The new snow-covered wind slabs can be released by a single winter sport participant in some cases above approximately 2600 m, caution is to be exercised in particular adjacent to ridgelines, as well as at the base of rock walls and behind abrupt changes in the terrain. On the Main Alpine Ridge, in the Ortler Range and in the Ultental and in high Alpine regions the likelihood of avalanches is a little higher.

Individual gliding avalanches are possible. This applies on steep grassy slopes below approximately 2600 m. Areas with glide cracks are to be avoided.

## Snowpack

### Danger patterns

dp.6: cold, loose snow and wind

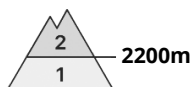

20 to 40 cm of snow, and even more in some localities, has fallen. In some regions 10 cm of snow, and even more in some localities, will fall. Wind slabs are lying on soft layers at elevated altitudes. The old snowpack is well consolidated and its surface consists of loosely bonded snow lying on a resilient melt-freeze crust.

## Tendency

The avalanche danger will decrease gradually.

## Danger Level 2 - Moderate

**Tendency: Decreasing avalanche danger**  
on Thursday 25 04 2024

New snow

Snowpack stability: **poor**

Frequency: **some**

Avalanche size: **medium**

Small to medium-sized loose snow avalanches are to be expected. Wind slabs in the high Alpine regions.

## Snowpack

### Danger patterns

dp.6: cold, loose snow and wind

10 to 20 cm of snow, and even more in some localities, has fallen. Up to 15 cm of snow will fall. Wind slabs are lying on soft layers at elevated altitudes. The old snowpack is well consolidated and its surface consists of loosely bonded snow lying on a resilient melt-freeze crust.

## Tendency

The avalanche danger will decrease gradually.
