

## Danger Level 2 - Moderate

Tendency: **Decreasing avalanche danger**  
on Friday 26 04 2024

Wind slab

Tree line

Snowpack stability: **poor**

Frequency: **few**

Avalanche size: **medium**

On very steep slopes individual small to medium-sized loose snow avalanches are possible. Fresh and older wind slabs in the high Alpine regions.

Some small to medium-sized loose snow avalanches are possible, in particular on very steep sunny slopes.

The mostly small wind slabs can be released, especially by large additional loads, above the tree line, caution is to be exercised in particular adjacent to ridgelines, as well as at the base of rock walls and behind abrupt changes in the terrain. At high altitude and in high Alpine regions the likelihood of avalanches is higher.

Individual gliding avalanches are possible, especially on very steep sunny slopes below approximately 2200 m. Areas with glide cracks are to be avoided.

### Snowpack

#### Danger patterns

dp.6: cold, loose snow and wind

Over a wide area 20 to 40 cm of snow, and even more in some localities, fell in the last few days. The wind was moderate to strong at times. Wind slabs are lying on soft layers in particular on shady slopes above the tree line. The old snowpack is well consolidated and its surface has a melt-freeze crust.

### Tendency

The avalanche danger will decrease gradually.
