

Danger Level 3 - Considerable

Treeline

Tendency: Increasing avalanche danger
on Monday 30 September 2024

New snow

Treeline

Snowpack stability: **poor**Frequency: **some**Avalanche size: **large**

Wind slab

Treeline

Snowpack stability: **poor**Frequency: **few**Avalanche size: **very large**

Faceted weak layers exist in the old snowpack. The weather report and anticipated change in the avalanche danger are uncertain. The avalanche danger should be investigated very thoroughly in the relevant locality. Above approximately 2000 m medium-sized wet avalanches are to be expected as the day progresses.

With the change in wind direction, the avalanche activity will appreciably increase. Whumpfung sounds are a clear indication of a weakly bonded snowpack. Faceted weak layers exist deeper in the old snowpack in all aspects.

Snowpack

Danger patterns

dp.1: deep persistent weak layer

dp.7: snow-poor zones in snow-rich surrounding

Shooting cracks when stepping on the snowpack and whumpfung sounds serve as an alarm indicating the danger.

Tendency

Fresh avalanches and whumpfung sounds are a clear indication.
